

```
/*
Author: Samantha Ngo
Course: CSCI-135
Instructor: Genady Maryash
Assignment: Project 2 | Phase 2 | Pseudocode
```

This is the pseudocode for the function that, when given a user-inputted word, prints out either identical words with the same pronunciations from the CMU Pronunciation Dictionary if there are any.

```
*/

Variable after //Defined and initialized earlier when getting the pronunciation
Variable before //Defined and initialized earlier when getting the pronunciation
Variable target //Defined and initialized earlier when getting the pronunciation
Variable targetPronunciation = after //Store pronunciation of target word
For line in file{
    Use splitOnSpace to separate word from its pronunciation
    If pronunciation matches targetPronunciation{
        Append it to the return string
    } else {
        Continue reading through the file.
    }
}
Return and print out return string
```
